

Primary DAO

The central authority and root of the ecosystem.

Role: Governance of the Safe Treasury, creation and deactivation of sub-DAOs, and high-level dispute resolution.

Treasury: Controls the central Safe Treasury.

Membership: Always acquired indirectly. To be considered, you must first become an active contributor inside the sub-DAOs of the organisation's ecosystem.

The PrimaryDAO can take the following actions:

→ It can create new IdeasDAOs and confirms the creation of PhysicalDAOs. But PhysicalDAOs can only be created after a proposal is made by an IdeasDAOs. It has the power to deactivate both types of sub-DAOs.

→ It also (re)assigns Safe Treasury allowances to its DigitalDAO and its PhysicalDAOs.

→ It can set an allowance amount to the DigitalDAO and PhysicalDAOs, but only after a proposal was submitted by either Digital or Physical sub-DAOs.

→ It can update its own URI (Uniform Resource Identifier) which contains all the metadata of the organisation, including designations of primary- and sub-DAOs needed in the front-end. In other words, to show new sub-DAOs in the frontend, the URI needs to be updated separately.

→ It can transfer tokens accidentally sent to its address to the Safe Treasury.

→ It can assign a membership role to Public accounts.

→ It can elect Executives from among PrimaryDAO Members.

Roles are not mutually exclusive, e.g. if a DAO Member is elected as an Executive they can still keep their original role and perform the same tasks as before in addition to their new tasks.

→ It can remove inactive elected Executives.

→ It can adopt new mandates (and as a consequence also revoke old ones).

HELLO my name is
PrimaryDAO Member
PrimaryDAO Members initiate new IdeasDAOs.

HELLO my name is
Admin
This role is revoked at setup.

HELLO my name is
Executive
Executives are elected from amongst Members. They must execute the creation of IdeasDAOs and PhysicalDAOs.

Powers Factory

Powers Factory at Powers Protocol deploys preset governance instances. PrimaryDAO is the owner of two PowersFactory's: One that creates new IdeasDAOs, and one that creates new PhysicalDAOs.

Ideas DAO

A sub-DAO format for the free and experimental incubation of new concepts.

Role: Incubator for new initiatives. It is the birthplace of PhysicalDAOs.

Treasury: Does not typically hold an allowance. Operates on social capital and ideas.

Membership: See a topic being discussed that interests you? Send an application form to the IdeasDAO of your choice and a Convenor will review your application.

The IdeasDAO can take the following actions:

→ Initiate the creation of PhysicalDAOs.

→ Update its own URI (Uniform Resource Identifier).

→ It can transfer tokens accidentally sent to its address to the Safe Treasury.

→ Moderators can assess and assign IdeasDAO membership to applicants.

→ Moderators can revoke membership.

→ Members can apply for membership of the PrimaryDAO.

→ Conveners can assign and revoke Moderator roles.

→ Elect Conveners from among DAO members.

→ Adopt new mandates (and as a consequence also revoke old ones). There is no veto possible from the PrimaryDAO.

HELLO my name is
IdeasDAO Member
This role is assigned by filling out an application form, the Convenor/accept or decline applications. IdeasDAO Members initiate the creation of PhysicalDAOs

HELLO my name is
Moderator
A Moderator is assigned during the time where the 'Params' are entered by the person who starts a new IdeasDAO creation mandate. This role is responsible for assigning election tokens and granting or revoking membership into the IdeasDAO.

HELLO my name is
IdeasDAO Convenor
The first one must be elected after creation of a new IdeasDAO. New Conveners can be elected every 3-months from among members. Elections must be triggered manually (and can be triggered by anyone in the ecosystem if they see that there is one due). During elections, Participants nominate themselves for the Convenor role. The top three Participants with most Election Tokens get automatically elected as long as they haven't been elected twice before.

Achievement Badge (Soulbound ERC-1155)
This token is assigned when a Participant is elected into a role. For some elected roles, there is a maximum number of terms someone can be in that role, e.g. the IdeasDAO Convenors can only run for 2 terms. Achievement Badges not only recognise participation, but cancel out over-electing in the governance structure.

Election Token (Soulbound ERC-1155)
This token is assigned by Moderators through subjective assessment, given to accounts that are active in the IdeasDAO forums. It cannot be exchanged for a financial reward, but can be used to gain access to other types of roles e.g. a IdeasDAO Convenor or PrimaryDAO membership.

Attendance Badge (POAP)
Given to Participants for showing up to physical spaces. Can't be exchanged for financial rewards, but can be used to request membership into the PrimaryDAO.

NFT
This means that when the PhysicalDAO opens up a space in an IRL location, and cultural artifacts (such as artworks) are sold (and resold) the original creator is always paid royalty fees each time a sale occurs.

Real World Assets / NFTs (Governed ERC-721)
This smart contract has added governance functions which allow for royalty payments when an artifact is sold.

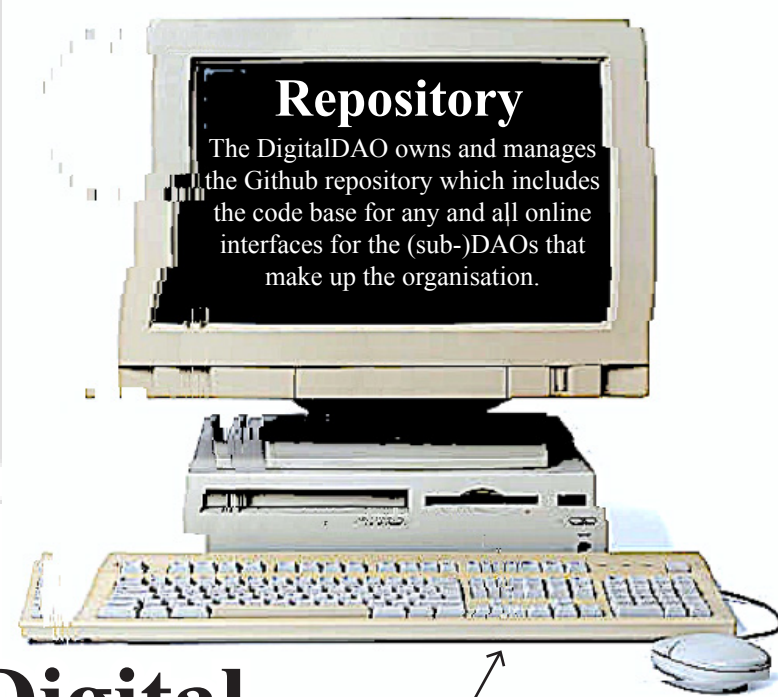

NFT

Merit Token (Soulbound ERC-1155)
These can be redeemed for financial rewards. Technically, this works by burning the token which activates another smart contract that sends the Participant a small share of earnings from the Safe Treasury.

HELLO my name is
Legal Representative
Members who have this role have gone through a process on ZkPassport to check if their age and nationality qualify to allow them to become a Legal Representative of a PhysicalDAO. This allows them to carry out planning activities such as signing contracts to rent spaces to host the IRL events. Assigned by PrimaryDAO.

ZkPassport
(Zero-Knowledge Passport) is a block-chain-based identity tool that lets users prove attributes—like age or location—without revealing personal data. Instead of sharing full ID details, it uses Zero-Knowledge Proofs to verify information privately and securely.

Cultural Stewardship (an experiment)

Digital DAO

A sub-DAO format that is responsible for all things digital infrastructure, code repositories, and online interfaces.

Role: Manages code repositories, commits, and digital representation of the organisation and its sub-DAOs.

Treasury: Has a set allowance from the Primary DAO's Safe.

Membership: Send commits via Github of code that you have written contributing to projects that are building within the ecosystem.

The DigitalDAO can take the following actions:

→ The Public can submit receipts with a request for payment for digital work completed.

→ DigitalDAO Members can propose funding for new projects to be implemented.

→ It can request an allowance from the PrimaryDAO.

→ It can update its own URI (Uniform Resource Identifier).

→ It can transfer tokens accidentally sent to its address to the Safe Treasury.

→ It can assign a membership role to Public accounts if they made successful commits to the Github repository.

→ It can elect Repository Admins from among DigitalDAO Members.

→ It can adopt new mandates (and as a consequence also revoke old ones) - but only if no veto was cast from the PrimaryDAO.

HELLO my name is
Digital DAO Member
This role is given via proof of activity to those who have made Github commits.

HELLO my name is
Admin
This role is responsible for creating the sub-DAO, and is revoked at setup.

HELLO my name is
Github Admins
This role is elected every 3 months from among Members to ensure that they are still able to uphold their responsibilities.

HELLO my name is
Public
Everyone who signs in with a wallet is granted this role upon entry into the ecosystem. They must take certain actions if they want to become a Member in any of the DAOs inside the ecosystem.

Physical DAO

A sub-DAO format that interacts with real-world jurisdictions.

Role: Manages physical events. This could involve the sale of physical artifacts, managing access to physical spaces, compliance to local jurisdictions, etc. Is initiated by an IdeasDAO but operates independently once created.

Treasury: Has a set allowance from the Primary DAO's Safe.

Membership: Show up to an event, and claim your Attendee role.

The PhysicalDAO can take the following actions:

→ Conveners can submit and approve payment of receipts. This includes payments for work done by Conveners, such as time spent organising for an IRL event.

→ Conveners can sell cultural artifacts which have been minted as ERC-721 NFTs outside of the ecosystem. Creators assign the PhysicalDAO as an 'operator' and the events become an 'exchange platform' for their cultural artifact sales. Creators can still sell independently from the PhysicalDAO, as their NFTs are not locked into this system.

→ Conveners can mint Attendance Badges from PrimaryDAO and hand out them out to Attendees at the event, this is done by inputting a wallet ID and manually airdropping the POAP to them.

→ It can select up to three Conveners at a time. This is done by Legal Representatives who assign nominees, and attendees can elect from this list of nominees through a Peer Select mechanism.

→ Attendee roles can mint Merit Tokens, which they could later exchange for financial rewards.

→ Legal Representatives can adopt and revoke executive mandates.

→ Update its own URI (Uniform Resource Identifier).

→ It can transfer tokens accidentally sent to its address to the Safe Treasury.

→ Adopt new mandates (and as a consequence also revoke old ones) - but only if no veto was cast from the PrimaryDAO.
